Multi-Step Income Statement

Candy Store Co.	
Income Statement	
For the year ended December 31, 2003	
Sales Revenue	100
Less: Cost of Goods Sold	(20)
Gross Margin	80
Operating Expenses:	
Sales Expense	(10)
Admin Expense	(5)
Advertising Expense	(5)
Operating Income	60
Other Revenues and Expenses:	
Interest Revenue	(2)
Income Before Taxes	58
Income Tax Expense	(10)
Net Income	48
Earnings Per Share	4.80

Gross Margin:
Sells product for more than cost

Operating Income:
Gross margin covered operating expenses

Income Before Taxes:
Management generates profits

EPS \$33 Net Income /
1,000 Average Shares Outstanding

INSPECTION REPORTS

The **Residential Tenancies Act** states the inspection report has to be in writing. Landlords and tenants are required to inspect residential premises within one week before or after a tenant takes or gives up possession of the residential premises. The landlord must give the tenant a copy of the report immediately following the inspection.

It is an offence for a landlord to make a deduction for damages from the security deposit when the tenant moves out if:

- the inspection reports are not completed,
- the inspection reports do not contain all the correct statements and signatures, or
- a copy of the reports are not provided to the tenant or tenant's agent.

Incoming and outgoing inspection reports must contain the following specific statements and must be signed:

- inspections should be conducted when the premises are vacant unless the landlord and tenant or their agents otherwise agree.

When an inspection has been conducted by the landlord and the tenant or their agents, the inspection report a. must contain the following statement and the landlord or the landlord's agent must sign the statement:

"The inspection of the premises was conducted on (date) by (landlord or landlord's agent) and by (tenant or the tenant's agent)" and

b. must contain both of the following statements and the tenant or the tenant's agent must sign one of the statements:

- "I, (name of tenant or tenant's agent), agree that this report fairly represents the condition of the premises"* or
- "I, (name of tenant or tenant's agent), disagree that this report fairly represents the condition of the premises for the following reasons:"*

Where the tenant or the tenant's agent refuses to sign one of the statements, the inspection report must contain the following statement and be signed by the landlord or the landlord's agent:

"The tenant or tenant's agent present at the inspection refused to sign the tenant's statement."

Where an inspection is conducted by the landlord or the landlord's agent without the tenant or tenant's agent being present, after 2 failed attempts to do the inspection together, the report must contain the following statement and the landlord or the landlord's agent must sign the statement:

"The inspection of the premises was conducted on (date) by (landlord or landlord's agent) without the tenant or the tenant's agent being present."

- A landlord can conduct the inspection without the tenant being present if the landlord has offered the tenant two inspection times, on two different days that are not holidays, between 8 a.m. and 8 p.m., and the tenant has refused or did not attend.
- The landlord must keep copies of the inspection reports for three years after the tenancy terminates.

Nested if statements in webi report.

Does this work? =if([Task Name]="Task 300";3; if([Task Name]="Task 400";1; if([Task Name]="Task 500";5)) If you put the pairs of values in a table, how often would the relationships have to be updated? The table could be built inside an SQL solely for itself. Or it could be a cataloged look up table, or anything in between. Bob Schmidt Thanks, that works. The number of ifs came out around 40ish? :-). James Osborne Strategic Technical Specialist Manager Unfortunately...the task name would equal an alpha numeric value such as "task300"? And each task would have a specific numeric value that is assigned to the task. Example 3 (interpreted; this would mean that this task has a 3 day duration). Thanks James Osborne Strategic Technical Specialist Manager try this using case statement...casewhen Task Name = "Task 300" Then Lead Time = 3when Task Name = "Task 400" Then Lead Time = 1when Task Name = "Task 500" Then Lead Time = 5end nosoyaguru (Programmer) (OP) 30 Nov 05 10:48 Why is it that the statement below only works for the first IF condition, I can switch the statements around but only the first condition works:if ((GUARANTEE_REPORT.PLUS_CERTIFIED_AMOUNT) > 0) then "PLUS"elseif ((GUARANTEE_REPORT.SUB_CERTIFIED_AMOUNT) > 0) then "SUB"else if ((GUARANTEE_REPORT.UNSUB_CERTIFIED_AMOUNT) > 0) then "UNSUB"else if

{GUARANTEE REPORT.CERTIFIED.AMOUNT} > 0 and {GUARANTEE REPORT.SUB.CERTIFIED.AMOUNT} > 0} then "COMB".There are no typos errors on Crystal 9.2 and Oracle 10g.Any help is appreciated. Through the use of the DayName function, we can display the day name of the week for a particular date. Today is Monday 13th February 2012. What would be the result of creating the following formula in WebIntelligence? =DayName(CurrentDate()) The answer is Monday. Today is Monday 13th February 2012. Now, if I wanted to display the previous working day, I couldn't use the RelativeDate function on it's own. Remember we are looking for previous working day and not previous day. In order to do this, we need to check the current day and determine if the previous day is a weekend. If it is, we need to adjust the output accordingly. We can develop this logic within WebIntelligence using a nested IF statement. Let's work through an example: Create a new WebIntelligence report. If you have a CurrentDate object in your universe, we can use that. If you don't, then bring back any object (preferably one that doesn't bring back many rows - we don't actually want to use that value, but we do want to end up with a table). If you do not have a CurrentDate object, create the following formula in WebIntelligence: =CurrentDate() Note that the format of the date value returned depends on how the universe object has been set up or how your WebIntelligence setup is configured. In some cases it may be formatted as dd-Mmm-yyy or dd/mm/yyyy. If you want to use a specific format and you are using the =CurrentDate() formula in WebIntelligence, you can format the date using: =FormatDate(CurrentDate();"dd-Mmm-yyyy") For the purposes of this article however, we will be using the default format. Add a second column to your table. We will call this column 'Current Day Name' and we will use the DayName function to return the day of the week: =DayName(CurrentDate()) Now to get the previous working date. We need to check the value (Day Name) of the current date. If it is a Tuesday, Wednesday, Thursday, Friday or Saturday, we will be fine using the RelativeDate function, as the previous day to the above listed days is a working day. (I'm ignoring Bank Holidays, Festive Days, etc. That's for a future topic!) However, if we find that the current Day Name is a Sunday or a Monday, then using RelativeDate is going to retrieve a weekend day. We need to handle these two scenarios using a nested IF statement. The statement is built up as follows: If the current day name is a Monday, then subtract three days from the current date If the current day name is a Sunday, then subtract two days from the current date The formula is made up as follows: =If(DayName(CurrentDate())="Monday",RelativeDate(CurrentDate()-3),If(DayName(CurrentDate())="Sunday",RelativeDate(CurrentDate()-2),RelativeDate(CurrentDate()-1))) Lets break down this formula. An IF expression has three components: If(boolean expr:value if true:value if false) The boolean_expr part is the statement that we test. In our case, we want to check if the CurrentDate() is a Monday. If it is true that it is a Monday, we want to use the RelativeDate function to subtract 3 days from the CurrentDate(). If it is false, i.e. the current date is not a Monday, we need to perform a further check. This requires a second IF statement to perform this second check. The second check asks if the CurrentDate() is a Sunday. If it is true that it is a Sunday, we want to use the RelativeDate function to subtract 2 days from the CurrentDate(). If it is false, i.e. the current date is not a Sunday, and we know its not a Monday as we checked for that previously, then we know that the day is a Tuesday, Wednesday, Thursday, Friday or Saturday and hence we can safely use RelativeDate with a value of -1 to give us the previous working day. The formula above displays the result in a date format. If we wanted to display the result as a Day Name only, we can tweak the formula a little to incorporate the DayName() function: =If(DayName(CurrentDate())="Monday",DayName(RelativeDate(CurrentDate()-3));If(DayName(CurrentDate())="Sunday",DayName(RelativeDate(CurrentDate()-2));DayName(RelativeDate(CurrentDate()-1)))) So using this formula we should end up with the following result: Current Day Previous Working Day Monday Friday Tuesday Monday Wednesday Tuesday Thursday Wednesday Friday Thursday Saturday Friday Sunday Friday Dear Experts, I'm facing with writing nested If/Else statement in webi as below. If(condition){ If(Condition){ Statement; }Else{ Statement; } }Else If(Condition){ If(Condition){ Statement; } }Else If(Condition){ If(Condition){ Statement; }Else If(Condition){ Statement; }Else If(Condition){ Statement; } }Else If(Condition){ If(Condition){ Statement; }Else If(Condition){ Statement; }Else If(Condition){ Statement; } } How should I write these statements with webi? Best regards, Chenna Yon Come for the solution, stay for everything else.Welcome to our community! We're working tech professionals who love collaborating.Start Free Trial Hello, I would like to understand how to do a nested if statement in Business Objects Web Intelligence. A standard if works fine - e.g. =If(Field1)="Yes";1;0) However, I have been unable to do a nested if - e.g. =If(Field1)="Yes", If(Field2)="2007"; 1 ; 2 ; 3) In the scenario above we are saying that if field1 = yes then it is a 1 (if field 2 also equals 2007) or a 2 otherwise, otherwise it is a 3 (i.e. if we have a no). I have used a pseudo code example for simplicity - would much appreciate some urgent help on this including exact syntax on how to do the example above as a nested if using proper WebI BusObjects formula syntax. Kind Regards, Raheel Network and collaborate with thousands of CTOs, CISOs, and IT Pros rooting for you and your success.Andrew Hancock - VMware vExpertSee if this solution works for you by signing up for a 7 day free trial.Unlock 1 Answer and 1 Comment.Try for 7 days"The time we save is the biggest benefit of E-E to our team. I want to check different conditions and based on each condition a specific action should be triggered. In the following example, I want to check the request type if it is new OR amondment AND Build Date Completion is not null then I need the days between the dates included in the first parenthesis otherwise I need the days between the dates included in the second parenthesis. However, when I run the query I could only see the actual formula pasted in each row. Does anyone know what I am doing wrong? ="If([Build Request Type]="New") OR If([Build Request Type]="Amendment") AND Not([IsNull(Build Date Completion) Then DaysBetween([Actual build date],[Ordering Tool Validation Complete Date]) else DaysBetween([Submission],[Actual build date])" 1 Conditional Formatting is used to highlight some specific values in the report. If you want you can show specific low or high values with some specific colors. Conditional formatting can be applied to the following elements - Rows in horizon tables Columns in vertical tables Cells in forms and cross-tables Sections Free holding cells Condition formatting can be used to make the following formatting changes - Text color, size and style, cell border, color, size and style, and cell backgrounds. You can add up to 30 conditional formatting formulas in a Webi document. Creating a Conditional Formatting Formula To create a conditional formula, open the report in Design mode. You must be using Rich client or App Interface and shouldn't work in Web mode. Go to Analysis -> Conditional -> New Rule. It will open formatting rule editor. Enter the rule name and description. Select the cell contents in filtered object or cell box. You can select Operator and Operands value. You have to define text formatting in Format tab. Click on Format to set the formatting of the tab. You can select the font, font style, size, effects (underline, etc.) and alignment. Once formatting is defined for condition, you have to click Ok. Now to apply conditional formatting to the object, select the column in the report. Go to formatting rules dropdown -> Select the conditional formatting rules checkbox you have created. Conditional formatting will be applied to the desired cells. You can add multiple conditions in a single formatting rule on multiple objects. Manage Conditional Formatting Rules Go to Analysis tab -> Conditional -> Manage Rules. Once you click 'Manage Rules', it will open window for Conditional Formats. To edit a rule, select the rule and click on Edit. You can also change the order of Conditional Formatting rules. You can also duplicate/remove conditional formatting rules using Manage option.
